The Thermal Disposal Difference

With AgriTech Thermal Disposal Systems, you'll avoid the hassle of composting and the risk of third parties coming to your site. Instead, you'll save time and money.

All you need to do is load the machine and start the cycle.

Building a **New Era of Mortality Management**

Thermal Disposal Systems

Mortality management is critically important to your ability to maintain biosecurity. Improving the process should be one of your top priorities.

But that's hard to do when you're feeling pressure to scale your operations, see a return on your equipment investments, fight off consolidation, and comply with an ever-changing set of regulations.

With other matters leaving little time to focus on improving mortality management, it's common for growers like you to employ the same approaches they have for years.

Still composting?

That can take upwards of a month to complete. And you have to tend to the bin throughout that time. Each time you open it to add bulking material you risk contamination.

Think freezers are better?

Freezing carcasses takes time and adds cost to your operations. And then you need to wait for a third party to remove them. This creates the potential for contaminants from other locations to be brought to your site, endangering your flock and the surrounding area.

The net result of these approaches? Risk—to your flock's health, and your financial future.

So why are you composting or relying on others for help? Instead, what if you could exert more direct control over mortality management?

With AgriTech Thermal Disposal Systems, you can.

With AgriTech Thermal Disposal Systems, you'll:

Keep it clean:

With AgriTech Thermal Disposal Systems, you'll be using a sterile process that kills all viruses and bacteria in a matter of hours. That means you don't have to keep expired chickens on your property while you're accepting new chicks. And you'll stop contaminants from spreading. This way, you'll stay on top of your biosecurity requirements.

Do it fast:

With AgriTech Thermal Disposal Systems, you start the cycle at the end of the day, and it's done by the morning. No more waiting for nature to take its course, or for someone to remove expired chickens from a freezer. And no more emptying, cleaning, and refilling bins. Instead, you'll save time, labor, and cost.

Make it easy:

With AgriTech Thermal Disposal Systems, you just need to load the machine and you're good to go. The cycle runs independently, and the byproduct is removed automatically. There's nothing new to learn, and no bulking agents to add or vendor schedules to manage. You'll cut one more thing off your list—without sacrificing biosecurity.
